AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

LISTING OF CLAIMS:

Claim 1 (currently amended) A drive nut device comprising:

a one piece drive nut body having a ~~desired~~ predetermined shape and further having ~~two ends~~ a first end and a second end;

~~one~~ said first end having a bore for mounting to a seat movement member;

and ~~the other~~ said second end having a drive nut formed as an integral part thereof, said drive nut having a threaded bore passing through the longitudinal axis of said drive nut.

Claim 2 (original) The drive nut device as claimed in Claim 1 wherein, said drive nut device is comprised of sheet steel.

Claim 3 (original) The drive nut device as claimed in Claim 2 wherein, said sheet steel is from about 0.5 mm to about 4.0 mm thick.

Claim 4 (currently amended) The drive nut device as claimed in Claim 1 wherein, said drive nut having a longitudinal length ~~suitable~~ predetermined to prevent undesired non-longitudinal axis movement of said drive nut device.

Claim 5 (currently amended) A vertical drive nut device comprising:

a one piece drive nut body having a ~~desired~~ predetermined shape and further having ~~two ends~~ a first end and a second end;

~~one~~ said first end having a bore for mounting to a seat vertical movement member;

and ~~the other~~ said second end having a drive nut formed as an integral part thereof, said drive nut having a threaded bore passing through the longitudinal axis of said drive nut.

Claim 6 (original) The vertical drive nut device as claimed in Claim 5 wherein, said drive nut body has a generally L-shape.

Claim 7 (original) The vertical drive nut device as claimed in Claim 5 wherein, said vertical drive nut device is comprised of sheet steel.

Claim 8 (original) The vertical drive nut device as claimed in Claim 7 wherein, said sheet steel is from about 0.5 mm to about 4.0 mm thick.

Claim 9 (original) The vertical drive nut device as claimed in Claim 5 wherein, said drive nut longitudinal axis is substantially at a right angle to said bore for mounting to a seat vertical movement member.

Claim 10 (currently amended) The vertical drive nut device as claimed in Claim 5 wherein, said drive nut having a longitudinal length ~~suitable~~ predetermined to prevent undesired non-longitudinal axis movement of said vertical drive nut device.

Claim 11 (new) The drive nut device as claimed in Claim 1 wherein, said drive nut body has a generally L-shape.
